

# EchoTouch

*Effortless, Interactive Control*

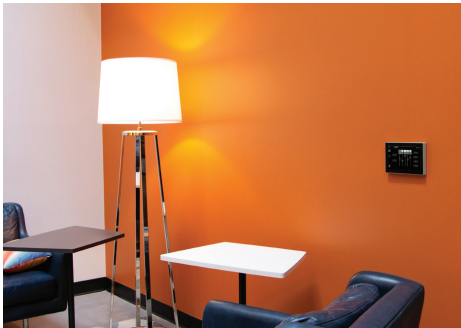

# EchoTouch

EchoTouch offers compact, intuitive touchscreen control of lighting in architectural and smaller entertainment spaces. Combining three powerful capabilities into one elegant device, EchoTouch can:

- Act as an interface into a standalone or integrated Unison Echo® control system
- Provide status and control of all Echo products
- Directly control DMX/RDM and sACN fixtures and devices

EchoTouch shines in all environments, whether an architectural application with users who need to choose between preset looks, or in an event space to create and recall predetermined looks.

EchoTouch works flawlessly in an Echo control system. All Echo control and power products are compatible: control stations, responsive controls, interfaces – even Room Controllers and Echo Relay Panels. When the Echo control system doesn't meet the need, integration with DMX and sACN power control and fixture products is also straightforward.

Users can locally program zones, presets, and sequences to control their devices. Programming is simplified with native RDM for discovery of connected fixtures. Color control is intuitive and accessible with a color and white picker, plus customizable color chips to let users take full advantage of their system.

## Stylish Setting

EchoTouch mounts to a standard 3-gang back box and is powered by PoE or 24VDC, making installation a breeze. Intuitive and easy-to-use faders and buttons display on a crisp and vibrant 7-inch screen with customized layouts and naming for any application.

The stylish, sleek, and durable design is built to hold up to daily use and high-traffic areas. Its modern style matches common architectural finishes, and it's designed to fit anywhere. The black glass front is offered in four bezel colors: Cream, Gray, Black, and White.

## Product Features

- Locally program and control zones, presets and sequences
- Directly control lights on any system that supports DMX or sACN
- 3-gang back box for easy install
- 7-inch touchscreen interface
- Intuitive and accessible color control
- RDM discovery of devices
- Black glass front with four bezel colors: Cream, Gray, White, and Black
